

# Gription® Degreaser FAQ

**Q: What makes Gription® Degreaser work so well?**

**A:** Gription® Degreaser has a patented “three-tools-in-one” technology that is specifically formulated to deep clean the toughest oily industrial surfaces where ordinary degreasers fall short:

- **Saponifier** – patented technology turns non-synthetic greases and oils into soap for easier removal and extra cleaning power
- **Solvent** – fortified with bio-based solvents and low-level butyl for enhanced cleaning power to dissolve remaining oil and grease
- **Surfactant** – contains EPA Award-Winning Green and Bio Renewable technology. Positive emulsion super-wets soil for easy removal; it lifts oils, grease, dirt and grime, trapping it in the water to avoid redepositing it on the surface.

These three components combine to thoroughly clean the floor and help reduce the possibility of slips and falls. Over time, you will use less degreaser to maintain a clean floor, saving you time and money.

**Q: What does Gription® Degreaser clean up?**

**A:** It cleans up oils, grease, dirt and grime. It is incompatible with strong acids.

**Q: What quantity options are available for Gription® Degreaser?**

**A:** CLN801 is four 1-gallon containers. CLN802 is a 5-gallon pail. CLN803 is a 55-gallon drum.

**Q: How can it be used?**

**A:** This low-foaming formula works equally well in mop buckets, auto scrubbers, spray bottles, parts washers, and steam or pressure cleaning equipment.

**Q: Is Gription® Degreaser water based?**

**A:** Yes.

**Q: Can I use Gription® Degreaser without diluting it with water?**

**A:** Although you can, it is not recommended since Gription® Degreaser is a powerful concentrate that needs to be diluted with some amount of water to work effectively.

**Q: What are the recommended dilution ratios for my auto scrubber, mop and bucket and spray bottle?**

**A:** The dilution ratio depends on your conditions (amount and type of contaminant, type of floor surface, frequency and cleaning procedure, etc.), but we recommend starting degreaser ratios at:

- 4 oz./gal. in an auto scrubber
- 6 oz./gal. in a mop bucket
- 2-8 oz./gal. in a bottle depending on soil level

You can then decrease the ratio as needed, especially after your floor has been cleaned for several weeks at this ratio. In some cases, you may need to increase.

Note that using too little Gription® Degreaser will not clean your floor as effectively as it could. Using too much Gription® Degreaser (as with any degreaser) could leave a slippery residue behind and waste degreaser and money. We recommend that you experiment with various water dilutions to determine the most effective and economical ratio before establishing a cleaning procedure. A Dilution Control Unit can help you maintain the perfect Gription® Degreaser/water mix every time. The Genie™ Portable Scrubber can also help you give floors a more thorough cleaning than a standard mop and bucket.

# Gription® Degreaser FAQ

**Q: Does Gription® Degreaser work better with hot or cold water?**

**A:** It works equally well in hot or cold water. The same applies for hard or soft water. It even works in salt water!

**Q: What type of floors does it clean?**

**A:** Gription® Degreaser is versatile enough to be used throughout the plant, on unsealed, sealed or epoxy-coated cement floor surfaces, laminate tile and office and lunch room floors. It often replaces multiple degreasers at a single facility.

**Q: What size area of floor will it clean?**

**A:** When tested in a floor scrubber like the Genie™ Portable Scrubber, 1 gallon of Gription® Degreaser diluted at 4oz./gallon of water cleaned a 24,000 square foot area. 2 oz. gallon cleaned 48,000 square feet. 5 gallons of Gription® Degreaser at 4 oz./gallone of water cleaned 120,000 square feet. You can expect similar results using any auto scrubber, depending on the level of soil on your floor.

**Q: Is Gription® Degreaser just for floors?**

**A:** No. It is also great for cleaning machines, equipment, parts and more. It's safe for any surface not damaged by water. It also acts as an odor neutralizer.

**Q: Is it safe for glass?**

**A:** Do not allow it to dry on glass, as it may etch.

**Q: Is it safe for metal surfaces?**

**A:** Yes. It contains anti-corrosion and anti-scaling inhibitors for safe use on metal surfaces.

**Q: If I want to test Gription® Degreaser in my facility, how long will it take until I see results?**

**A:** That will depend on your application and soil level. In many cases, you will see instant results. In other situations, such as a floor that contains years of soaked-in oil, it may take multiple uses. Cleaning results of Gription® Degreaser get better over time. Its patented formula deep cleans the floor to pull out soaked-in oil and dirt better than other degreasers, but it may take several weeks of use before your floor is truly clean and slip resistant and you see your floor's original color again. When we tested Gription® Degreaser in oily environments, we determined that you should be able to increase your dilution ratio and use less degreaser.

**Q: Does Gription® Degreaser contain butyl?**

**A:** Yes. For extra cleaning power in oily environments, Gription® Degreaser is fortified with low-level butyl. However, it contains such a low amount that Gription® Degreaser is not considered hazardous and does not require hazardous shipping labels.

**Q: Is Gription® Degreaser safe?**

**A:** Yes, but as with handling any chemical, follow the skin contact warnings on the MSDS. Use rubber gloves, safety goggles, work clothing covering arms and legs, boots.

**Q: What will happen if I get Gription® Degreaser on my bare hands?**

**A:** Since the purpose of a degreaser is to "degrease", Gription® Degreaser will remove natural oils from your skin. The skin-drying effect intensifies when Gription® Degreaser is in its concentrated form. The concentrate also has a high level of detergency (required for a concentrate), so you may experience "slipperiness" on your hands when you wash them.

**Q: Is Gription® Degreaser safe for the environment?**

**A:** Yes. It is NSF registered for public health and safety. It is biodegradable, VOC free (volatile organic compounds) and HAPs free (Hazardous Air Pollutants), non-fuming, and does not emit vapors that harm the user or the environment.

**Q: How do I dispose of it?**

**A:** You can dispose of it in your wastewater stream. As per the MSDS, dispose in an approved waste facility according to Federal, State and Local Regulations.

**Q: Is it approved by the USDA?**

**A:** Yes, for use in federally inspected meat and poultry plants. Category: A-1.

**Q: Can I purchase Gription® Degreaser anywhere else?**

**A:** No, Gription® Degreaser is specifically formulated for use in oily industrial environments and is available exclusively from New Pig.
